## Safety Valve Testing

Stritt & Priebe, Inc. is the only independent National Board-certified facility in New York State for the testing, recertification & repair of safety/relief valves for air/gas, liquid and steam.

Our expert service personnel are available for either bench testing here at Stritt & Priebe's Buffalo, NY location or in-line testing at your facility.

We want to help you protect your equipment, and more importantly, your people. Specific periodic inspection, testing and recertification of Safety Relief Valves assure that the valves meet ASME, API, & National Board standards.

Safety valves are essential to the protection of lives and property, so regular testing by an accredited organization is crucial to

ensure that valves are performing properly within certain limitations.

## Safety Valve Repair

Our valve techs can come to your location, or your valves can come to our 40,000 square foot facility. We can do it all!

- All materials & pressure classes
- Steam, air, gas & liquids
- Unique equipment to meet your needs
- Portable seat milling
- Lapping of safety & conventional valves
- Available 24 hours a day, 365 days a year

### Types repaired:

- Conventional spring operated
- Pilot operated
- Section I
- Section IV
- Section VIII
- Steam
- Liquid
- Air
- Gas

If for any reason our technicians deem a valve not repairable, one of our knowledgeable sales staff will assist you with replacing your valve with the proper product for your application.

## Inline Safety Valve Testing

We are proud to be able to offer you AccuTEST for the highest quality inline valve testing. Safety valves are essential to the protection of lives and property, so regular testing is crucial to ensure that valves are functioning properly.

That's why Stritt & Priebe comes to your facility to test your valves while still inline, with no system downtime. Our KT3000 AccuTEST lets us test your safety valves while in position, under a full load, without interruption to your service, for consistently superior, reproducible results.

The sophisticated software eliminates the possibility of human error during any step of operation, from automatic calibration of measurement sensors to the final result.

Reports are kept on file & always available.

## Safety Valve Sales

- Complete safety valve line with the facility to customize to your pressure, temperature & media requirements
- "Factory assembler" - reduced lead times with multiple component options
- Steam, liquid & gas valves ready to set & certify per your service conditions
- Trained, talented experts & specific equipment to "get the job done" on time
